

西南财经大学本科期末考试试题册（A）

（2025—2026学年第1学期）

以下各项由命题教师填写：

课程名称：面向对象程序设计（JAVASE）(英) 命题教师：王磊

适用对象（年级专业）：2025 信息管理与信息系统专业

使用试题的任课教师姓名：王磊

试题说明：

- 1、考试类型：闭卷[] 开卷[√]
- 2、本套试题共 二 道大题，共 5 页，完卷时间 120 分钟。
- 3、考试用品中除纸、笔、尺子外，可另带的用具有：
计算器[] 字典[] 资料1本[√] 等
(请在下划线上填上具体数字或内容，所选[]内打钩)

考试时间（由制卷方填写）：

以下各项由学生填写：

任课教师：

年级专业：

学生姓名：

学 号：

- 考生注意事项：
1. 出示学生证（或身份证）和准考证并放置于桌面左上角，以备查验。
 2. 领取试卷后清点并检查试卷页数，如有重页、页数不足、空白页及印刷模糊等举手向监考教师示意调换试卷。
 3. 答题前先将试题册及答题纸上的任课教师、专业、年级、学号、姓名等信息填写完整。
 4. 所有答案均需填写在答题纸上，填写在试题册上无效。
 5. 考生不得携带任何通讯工具进入考场。
 6. 考试结束后，将试题册、答题纸和草稿纸等材料上交监考教师，不得带离考场。
 7. 严格遵守考场纪律。

Part I: Single Choice Questions:

Mark your answers on below sheet (total 30 pts, 3 pts each)

Answer sheet:

1	2	3	4	5	6	7	8	9	10

1. When you divide an **int** by a **double** in Java, the result will be a _____ type.

- A. int B. double
C. long D. float

2. What is the output of the following code?

```
int age=22;
boolean flag = age > 10;
if (flag) {
    System.out.println("old");
} else {
    System.out.println("young");
}
```

- A. old B. false
C. both old and young D. No output

3. How many times will "**Hello Java**" be printed in the following code?

```
int i = 1;
while (i < 5) {
    if( i%3 == 0)
        break;
    System.out.println("Hello Java");
    i++;
}
```

- A. 1 B. 2

C. 3

D. 4

4. Which of the following is correct about method **overloading** in Java?

A. Methods must have the same name and same parameter list

B. Methods must have the same name and different parameter lists

C. Methods must have different names and same parameter lists

D. Methods must have different names and different parameter lists

5. Which statement is **correct** about creating an array with 4 int elements?

A. `int [] arr = [1,2,3,4];`

B. `int arr = new int[4];`

C. `int [] arr = new int[4];`

D. `int arr= {1,2,3,4};`

6. Analyze the following code, what will it output?

```
public class MethodTest {  
    public static void main(String[] args) {  
        int a=3, b=5;  
        g(a, b);  
        System.out.println("a="+a+",b="+b");  
    }  
    public static void g(int a, int b) {  
        a=a+1;  
        b=b+1;  
    }  
    public static void g(double a, double b) {  
        a=a-1;  
        b=b-1;  
    }  
}
```

- A. a=2, b=4 B. a=2.0, b=4.0
C. a=3, b=5 D. a=4, b=6

7. Which of the following is a **correct** constructor for a class named **Person**?

- A. `public void Person() {
 }
}`
B. `public Person(int age) {
 }
}`
C. `public Person(String name) {
 return name;
}
}`
D. `public int Person() {
 return 0;
}`

8. Which keyword is used to call the superclass constructor in a subclass?

- A. this B. implement
C. extends D. super

9. What is the result of the following code?

```
class Parent {  
    public void show( ) {  
        System.out.println("Parent");  
    }  
}  
  
class Child extends Parent {  
    public void show( ) {  
        System.out.println("Child");  
    }  
}
```

```
public class Test {  
    public static void main(String[] args) {  
        Parent p = new Child( );  
        p.show( );  
    }  
}
```

- A. Parent B. Parent Child
C. Child D. Runtime error

10. A subclass cannot inherits _____ from its superclass.

- A. public method
B. protected method
C. private method
D. abstract method

Part II: Write Programs.(total 70 pts)

1. (10pts) Write a program that prompts the user to enter a three-digit positive integer, and prints its reverse (e.g., input 123, output 321).
2. (15pts) Write a program that prints the first 20 Fibonacci numbers, and then computes and prints the sum of all them. (Note: the Fibonacci sequence starts with 1 and 1, and each subsequent number is the sum of the previous two, e.g. 1, 1, 2, 3, 5, 8, ...)
3. (20pts) Write a test program to create a **Book** object and an **EBook** object, and call their `printInfo( )` methods to display detail information of them, where

- The **Book** class has 3 member variables (title[书名], price[价格], and pub_year[出版年]), a constructor to initialize them, and a member method printInfo() to display the book's information.
- The subclass **EBook** inherits from **Book**, and adds a member variable: fileformat ([文件格式], e.g., "PDF", "EPUB"). Meanwhile, the **EBook** class implements the **Discountable** interface and overrides its priceAfterDiscount(double p) method. Finally, the **EBook** class overrides the inherited printInfo() method to display more information (e.g. format information, and the price after discount).
- The interface Discountable only has a method priceAfterDiscount(double p), which returns the price after discount at given discount rate (e.g. parameter p).

4. (25 pts) Please design a Java GUI program for a middle school student, which can calculates the sum of all integers within any specified range. The GUI program may run like below. When the user inputs the lower bound (integer type) and the upper bound (integer type), and click the “Calculate” button, it will display the sum in the third TextFiled object.

Requirements:

- It should have suitable Java FX GUI components and layout.
- It should contain at least one event handling process.
